NOTES:
 Measurements are to be checked "in situ", equipment to be determined.
 The contractor is not to scale from this drawing but follow the written finished dimensions.
 Any discrepancies between the drawing and the other contract documents or any discrepancies within a drawing or between drawings must be reported immediately to the architect.
 This drawing shows the unit as existing surveyed by others.
 The contractor is to inspect the site prior to tender and is responsible for the Works in accordance with the drawings and structural engineer's details ensuring that the work is undertaken safely.
 The contractor will be responsible for the setting out of the works.
 Contractor is to allow for all fire stopping through walls, ceilings and floors.

The electrical installation is to be in accordance with the current edition of the IEE regulations and all cabling to be LSF. The specialist consultant is responsible for the detailed services design including loadings, cable and pipework routes and pipework/ cable sizing & spec. All cable tray, MS conduit and other services are to be exposed below slab/ ceilings unless noted otherwise.
 The specialist consultant is to be responsible for the detail design of M&E/ H&V & Refrigeration installation including all switch/ socket outlets. Where switch/ socket outlets are located in stainless steel crash panels in retail area, faceplates to be finished brushed stainless steel. The fire alarm system to be installed to comply with BS 5839 Part 1 and interfaced with Station system as required. The station's specialist contractor will undertake the interfacing and commissioning works as a nominated contractor unless agreed otherwise.
